

Puredry PD 12L is specially formulated to handle moisture directly with the lower possible power consumption.

New unique designed, two in one dehumidifier and air purifier, saves up money from running cost by keeping your electricity bill as low as possible. If you need a dehumidifier for a house up to 80 sq.m. and you want to clean the air at the same time from harmful microparticles of dust, pollen, chemicals etc. then this is the best dehumidifier for you. The new Design series is the best solution to the problem of energy consumption. Now we can say with certainty that the Puredry Design Low Energy Series creates a new benchmark from the rest of the market.

Silent Operation

Puredry PD 12L Design is made of high quality materials that contribute to very low noise emission. There are special compartments mounted on the compressor, specially soundproofing material to minimize compressor's operating sound. The noise level during operation is 39 dB. Recommended for areas where silence is required, as well as for sleep and rest.

Clean Atmosphere

Puredry PD 12L, in addition to high dehumidification quality, also provides air purification through its carbon filters as well as the operation of the ionizer and ultraviolet UV lamp. Positive and negative ions released enrich the air, retaining dust, suspended solids and bacteria. Carbon filters hold in chemicals from cigarettes and unpleasant odors. The UV lamp "kills" pathogenic micro organisms. With these combinations, clear air is provided free from germs, dust and unpleasant smells.

Carbon Filter

Dry your clothes hygienically and economically with the drying clothes function. All you have to do is to place the dehumidifier in a room or in the bathroom (closed door). Place clothes at least 30-40 centimeters away from the dehumidifier. Select Cont mode. The dehumidifier dries your clothes by enhancing the sense of freshness in your space and your clothes.
