

Maximum performance even in the toughest applications

The Puredry Sofia PD2419 Design dehumidifier is made of high quality materials that contribute to very low noise emission. There are special sound insulation materials placed around the compressor to absorb the maximum sound of the compressor operation. The noise percentage during its operation is only 38dB. Recommended for places where quiet is required, as well as for conditions of rest and sleep.

At Puredryhellas we design innovative functions and capabilities every day, giving more importance to the quality of construction and performance. That is why our customers are our source of inspiration.

Maximum efficiency with the lowest possible consumption.

Energy saving

The economical operation of the dehumidifier is further enhanced thanks to its energy saving program.

By activating the smart save energy function, the dehumidifier works until it brings the desired humidity levels. Once this is done it will stop working completely and start again when the humidity levels rise. This function drastically reduces the operating time of the device, avoiding its reckless use. This feature saves money on your electricity bill.

Laundry Drying Function

You will no longer be bothered by the weather outside the house or if the relative humidity levels are high. With the Sophia PD2419 dehumidifier, the drying process is very easy and fast. All you have to do is spread out the wet clothes and close the door of the room.

This function will impress you both with its immediate and drastic results and with its extremely low operating costs, ensuring dry and fragrant clothes in the most economical way. Ideal for every housewife who wants to save time and give the feeling of freshness to her clothes again.
